

VJ Scientific's proprietary X-ray technology is non-thermal and chemical-free and used in the cannabis industry to safely and effectively inactivate pathogens such as mold, yeast, bacteria, aspergillus, e. coli, and salmonella on cannabis without loss of quality.

*"Since we started using the machine, we've had zero failures. We've seen zero (negative) effects...for THC, terpenes, flavonoids, anything. It's absolutely amazing."*

-L.F. Level-2 Cannabis Operator, Ohio

## CONFIDENCE IN EVERY BATCH

Say hello to the **CX-1000 X-ray Decontamination System** & goodbye to microbial worries!

- **Dual X-ray Sources**  
Our CX-1000 boasts two X-ray sources, ensuring consistent and thorough decontamination from every angle. Say goodbye to uncertainties and hello to results you can rely on.
- **Automatic Dose Control**  
No operator guesswork! Our system features automatic dose control, taking the complexity out of the process and guaranteeing precise, efficient decontamination.
- **Container Agnostic**  
We understand that operators have various needs. That's why the CX-1000 is designed to process cannabis in bins, bags, trays, or even final packaged products.
- **Lease-to-Buy Program**  
Our lease-to-buy program is designed with your needs in mind, offering a path to compliance that is not only affordable but also flexible and supportive.
